

Life Size Foot Joint Anatomical Model Skeleton

RRP: \$89.95

This life-size anatomical model is an ideal visual teaching aid.

This life-size, anatomically correct human foot is designed as a visual aid for teachers of physiology, podiatry and anatomy.

Using this model will assist teachers in helping students learn and understand the morphology and construction of the foot. The moveable model accurately demonstrates the movements and functions of the human foot as well as its external anatomical structure.

The material is durable high quality PVC.

Educators, order this life-size foot today and be a step ahead in teaching your students about the human body.
