Keyless deadbolt digital electronic door lock keypad mechanical Code Entry Door

RRP: $134.95

With burglaries and home invasions on the rise, there's nothing like this keyless deadbolt entry door lock by Randy & Travis Machinery to keep you and your belongings safe. With a spring-loaded latch, it locks automatically as soon as you close your door. No worries about leaving your keys inside. A simple, easy-to-remember code will get you right back inside.

This lock's deadlocking plunger feature helps to prevent latch shimming, while a slide button holds open the latch bolt so you can enter without using the code while the lock isn't active. It also gives you the option to disable the requirement for a code every time you open the door.

The lock comes with a random code that starts with the clear button, marked 'C.' If you want to change the code after installation, simply remove the lock from the door. Codes are non-sequential, so you can enter codes in any order. For instance, the code '4321' can also be 1342, 4321, or another sequence that makes sense to you and your family. With 9 buttons, you have the option of choosing from thousands of unique codes that you may enter in any order. Protect your family and your possessions. Order your keyless door lock today!
