

25w Swimming Pool Lights Led 12-32V Resin Filled Underwater Spa lamp

RRP: \$404.95

At Randy & Travis Machinery, we can help you create the perfect nighttime ambience for your outdoor pool, spa or jacuzzi. Our LED swimming pool lights can take on different colours depending on your mood or the occasion. They are fully waterproof and specifically designed for full submersion in a body of water. LED technology is the perfect choice for your pool as the lights last for thousands of hours and will not need replacing for a long time. We recommended using these in-ground pools for the best results.

Each light has a casing of plastic and resin. The resin helps to enhance the protection around the device when it is in the water. They have an IP68 rating, making them 100% waterproof. Ideally, they should be submerged 1m deep or more and it's important not to use them out of the water. They are wall-mounted and measure 26cm x 4cm.

You can order as many as you need to fit the scale of your pool. We use SMD technology with ultra-bright LEDs to make them really stand out and illuminate the space. Each light has a 120-degree beam angle, dispersing a wide range of light. They require 25W and need to be set up with a transformer. It's best to seek professional installation to ensure safety.

The lights operate in RGB colour, with 7 different colour options. There are 16 modes to choose from in total, all of which can be controlled via the accompanying remote control. This allows you to easily change the colour from a distance, which can make quite the impact on guests at a pool party.
